

Cambridge, United Kingdom

Dear Cambridge University Faculty of Mathematics,

We are writing on behalf of the 2024-25 Mathematics Student Representative Committee to nominate Professor Löwe for the Mathematics Faculty Teaching Prize. After having carefully considered the feedback forms from Parts IA, IB, II, and III from the last two years, we found a considerable pool of very strong candidates. However, we arrived at the conclusion of awarding this prestigious prize to Professor Benedikt Löwe, Fellow of Churchill College. Professor Löwe had an outstanding student feedback result from both courses he taught during this time period, namely Large Cardinals (Part III) and Automata and Formal Languages (Part II). Professor Löwe received consistently strong feedback from students, who found his course stimulating, well-structured and clear, and felt that his notes were incredibly well structured and useful. In particular, Professor Löwe was able to effectively revamp the Automata and Formal Languages course; with lectures that taught the content in an engaging and insightful way, and example sheets that were interesting and useful for enhancing student's understanding of the course.

Yours sincerely,

James Cater, Michelle Ching, Jay Manson-Whitton, Gabriel Najmias
