

# Modern Statistical Methods (M24)

Professor R. D. Shah

The remarkable development of computing power and other technology now allows scientists and businesses to routinely collect datasets of immense size and complexity. Most classical statistical methods were designed for situations with many observations and a few, carefully chosen variables. However, we now often gather data where we have huge numbers of variables, in an attempt to capture as much information as we can about anything which might conceivably have an influence on the phenomenon of interest. This dramatic increase in the number variables makes modern datasets strikingly different, as well-established traditional methods perform either very poorly, or often do not work at all.

Developing methods that are able to extract meaningful information from these large and challenging datasets has recently been an area of intense research in statistics, machine learning and computer science. In this course, we will study some of the methods that have been developed to study such datasets. We aim to cover a selection of the following topics:

The course will cover a selection of topics including:

- Kernel machines: Ridge regression, the kernel trick, the representer theorem, kernel ridge regression, the support vector machine, the hashing trick.
- Penalised regression: Model selection, the Lasso, variants of the Lasso.
- Aspects of causal inference and double/debiased machine learning;
- Multiple testing, including closed testing and the Benjamini–Hochberg procedure.

## Prerequisites

Basic knowledge of statistics, probability, linear algebra and real analysis. Some knowledge of asymptotic statistics may be helpful.

## Literature

1. T. Hastie, R. Tibshirani and J. Friedman, *The Elements of Statistical Learning*. 2nd edition. Springer, 2001.
2. P. Bühlmann, S. van de Geer, *Statistics for High-Dimensional Data*. Springer, 2011.
3. C. Giraud, *Introduction to High-Dimensional Statistics*. CRC Press, 2014.
4. R. J. Samworth and R. D. Shah, *Modern Statistical Methods and Theory: An Introduction to High-Dimensional and Nonparametric Statistics*. Cambridge University Press, Forthcoming.

## Additional support

Four examples sheets will be provided and four associated examples classes will be given. There will be a one-hour revision class in the Easter Term.
